

Group: HAT Trick

Reinforcement	Improvement
I like how they have everything planned out. They know what they want all of the buttons to do.	They showed the figure of the muscles because it is not super clear to me what that would work.
I like the color scheme you chose and also how you incorporated the colors into your mockup screens. The actual function of your project is also pretty cool, especially how you can customize your own workout routine.	It would be cool if you also include instructions on how to perform said workouts.
You have the screens really thought out and how all the components connect.	You had a better idea of how you are gonna connect your panels and frame to each other.
The program flow is very detailed.	N/A
I like the color schemes you used. They're very appropriate for the topic.	It would be interesting if you used something to store the exercises and the muscles that they affect.
I like the visual representations and slides. I think the themes and organization of the program looks good.	I wish that the project was explained a little better before showing the screens. I wasn't really sure what the purpose was until later on.
It's very useful for athletic themes	the home screen was a little less jumbled looking
This is a really awesome idea and the presentation looks great. The mockups look great too.	n/a
They have a good idea of what the program will look like well detailed plan and mock up screens they speak loud enough yes!	add instructions to how to do the workout?
It is a straight forward project nice, helpful features I liked the cobber logo	changing the colors? I know its for cobber's , but yellow is kind of annoys eyes, it have been white display with yellow sides
i like that their presentation is well rounded and they seemed like they had a solid idea of what they were doing.	N/A

Unclear	Alternatives
Again I am just a little confused on how the whole muscle thing would work and also how they would create the actual exercises. (but with more time I am sure they will figure that out!)	I don't know just the actual content of the website is a little confusing to me. I am excited to see how it turns out!
Could you explain how users will be able to save the workouts they created, do you have a save button?	Have you considered decreasing the amount of features you have, because it'll be hard to store the data.
N/A	Adding recommendations for workouts
How the progress is displayed with colors.	Some kind of meal/calorie tracking capability.
I don't really understand much about working out. Will there be something to explain to new users how to use the program?	Have you considered using more visuals and graphics in your result?
-	Adding a workout schedule
what each feature/ button is going to do	Maybe making the logo smaller for the rest of the buttons to be bigger?
n/a	having some pre-set workouts/ programs?
is the app automatic or do you have to input your session stats after each workout how will you store this information	good job!
N/A	-
i am unsure of how the target muscle are we deciding on the muscle group we are working or will the application know what muscle group we are working on.	N/a
